

Server

web based license management

Server - web based license management

Introduction

Are you tired of having restricted software access? People leaving your organisation with your software on their PC's? Dongles being lost, broken or stolen? You simply want a software license that gives you flexibility and power!

WE HAVE THE ANSWER – siliconcoach has employed a web based server license management system that gives you all the flexibility you desire and more. With licenses held on a web based server and set up in a centralised license pool there is no more loaning of PC's, no more software being lost when someone leaves an organisation. With the flexible management system easy tracking of users tells you who is making the most of your investment.

If you work in an organisation that requires multiple users, then siliconcoach Server is the right product for you.

Key Features

Multiple site - You can load your siliconcoach software application (s) onto multiple local PC's. Your entire classroom or coaching staff can then access your license pool from multiple sites.

Multiple access - You could hold a pool of 15 licenses accessible to all users within an organisation (with a valid login ID) using the software from any PC anywhere with an internet connection (licenses can be "checked out" for field use). This makes for efficient use of the licenses.

Centralised License pool - is held on a web based server, no configuration or set up on your organisations server, no more locating the individual machines that have the licenses "locked" on to. No transfer or reset licenses as machines are changed etc.

Self Manage - The users of the license pool manage themselves there is no hands on management of the license pool required.

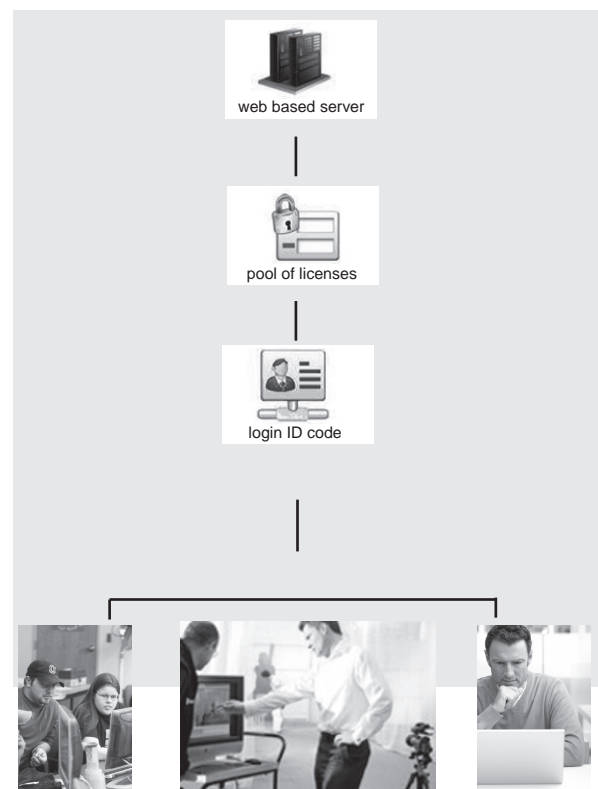

Return on investment – A license liaison person will receive notifications from the system when particular events occur, the emails are informational and do not require any action but notify of usage – any license irregularities and supply vs. demand.

Security - Users can be given access to the application from their personal computer via their login details and at any time the administrator can deny their access by removing them from the list of registered users. Ideal for managing changes of students between years but giving them easy access while they are at the institution.

License types

Checked out - Licenses can be "checked out" for specified periods so a coach or analyst going out into the field where there is no internet connection can check out a license to a particular PC and use the application for the length of the "check out" period without connecting to the internet. Once the check out period expires the license automatically returns to the central pool – a great reduction in administration time.

Floating - this license requires a connection to the internet at all times. When the user quits the application, the license is returned to the server and is immediately available for reuse.

Floating or checked out licenses can be used in the classroom, in the field or at home

Advantages to you

Group licensing – Licenses can be allocated to particular groups in your organisation in different ways. A typical scenario might be that you have 30 licenses of siliconcoach Pro and you want to make sure that a license is always available for each relevant staff member and that staff members can check out licenses while students cannot. On that basis we can setup a Staff group and a Student group and assign each an organisation ID (which acts like a password). The Staff group would have a pool of licences for a product on a one to one basis and the licences would allow checkouts up to a specified number of days. The Student group would have fewer licenses than the total number of students (in line with your expectation for required licenses at anyone time) and the licences would be restricted to the floating type whereby an internet connection was required while using the application so that the license could be returned to the server when the application was closed. This is illustrated in the table below:

Group Name	Id	Product	Licenses	Allow checkouts	Max days (<= 15)
Staff	Pa55word	TimeWARP	5	yes	10
		siliconcoach Pro	5	yes	10
Students	Passw0rd	TimeWARP	25	no	
		siliconcoach Pro	25	no	

Mix and Match

Because you can measure the usage of siliconcoach software it is a simple task to increase the number of licenses for your organisational requirements, additionally look to change the product mix, you may wish to add a TimeWARP license to your pool of licenses – all done at the touch of a button.

Add benefit to your membership program

If you run an association membership or coaching membership scheme you may decide to add the additional benefit of access to your organizations video analysis software license pool, potentially charging a small fee to cover the license pool costs.

Simple system use

- Set up a server account by supplying some information- this is a refining process depending upon your organisational requirement
- Login ID's will be created within the set up process and "groups" can be created
- Download siliconcoach product(s) onto all local PC's that may be used – remember this can be multiple sites
- When siliconcoach product (application) is launched you are asked to login via the web based server (with a valid login ID)
- Based on original set up you may "check out" the license for use in the field until check out period has expired when the license will automatically return to the license pool.

Pricing information

Tailored pricing solution to fit your needs, the server license system is the most cost effective solution for multiple users within an organisation.

USER RATIO: Due to the ability to have multiple users to 1 license e.g. 5 registered users can access 1 license, the ROI (return on investment) for utilising the sever license management system is second to none, in this case the cost of 1 * 12 month license can be spread across 5 users.

Please refer to our 12 month annual license pricing schedule at www.siliconcoach.com/shop to give you an understanding of cost. You can contact a member of siliconcoach in your area and request a quote today.

Please note:

- * siliconcoach Server is only available as a 12 month annual license.
- * Minimum quantity required for Server set up is typically 5 siliconcoach products which must include Pro.

Getting started

1. How many licenses are required for a product (e.g. siliconcoach Pro or TimeWARP)?
2. How many of those licenses do you wish to be floating and how many checked out?
3. Who will have access? Who will be the license liason person ?

System requirements

Minimal

- Digital video camera (MiniDV)
- Internet connection
- Windows® XP Service Pack 2, Windows® Vista
- CD read/write
- Sound card
- Firewire port (IEEE 1394)
- 2.0 GHz Pentium 4
- 5+ 20 GB free hard disk space
- 12 MB RAM (for XP), 1 GB (for Vista)

Optimal

- Digital video camera (MiniDV)
- Internet connection
- Windows® XP Service Pack 2, Windows® Vista
- CD/DVD read/write
- Sound card
- Firewire port (IEEE 1394)
- 2.2GHz Core 2 Duo or similar
- Separate graphics card with 128 or 256 MB video RAM
- 2 GB RAM (for XP), 3 GB (for Vista)
- 60 GB free hard disk space
- 1280 x 1024 or larger monitor
1024 x 768 monitor
